

Assessment Overview

- Kindly find the **Sales Analysis.pbix** file as the assessment for your application.
- The provided data is dummy data representing a sales dataset.
- The assessment consists of two main parts:

1. Two Analytical Dashboard Pages

- One page should be dedicated to **C-level executives**, and another dashboard page for the **sales team (Operational)**.
- Use visuals and DAX functions as you see fit. You may also create additional pages if needed, based on the problems you're addressing.
- The focus is on generating meaningful insights—not the number of visuals. Feel free to increase page height if required.
- **Showcase your strongest analytical and technical skills.**
- Dashboard formatting is crucial (shapes, colour coding, icons, alignments, etc.). It should be visually appealing and professionally designed. Clear and readable DAX measures will be noted.
- Some data model relationships may be incorrect or incomplete—feel free to adjust as needed based on your analysis.
- Incorporating advanced Power BI features (such as **tooltips**, **drill-through**, etc.) is a plus.

2. Specific Requirements:

- For each question, kindly put your answer/analysis in a separate page, please name the page with the question number:

1. Add a single-select Year slicer and a single-select Month slicer. The page should include a line chart showing the monthly trend of Ordered Amount vs. Delivered Amount, with a tooltip on hover that displays this month's values for the last three years of the selected year (e.g., hovering over May 2024 shows a comparison between May 2022, May 2023, and May 2024).

2. On the same first page, When a specific month is selected, it should be visually highlighted with a different colour to indicate selection, while the other months remain visible but filtered.

3. Maintain the Access restrictions in your dashboard's data as follows
 - a. User A: Can access all TV and Video Category Data
 - b. User B: Can access specific category in TV and Video.

User	Category	Sub-Category	Data to be Accessed
A@abc.com	TV and Video	NULL	Entire Category
B@abc.com	TV and Video	Car Video	Specific Subcategory

Please make your RLS table as the previous table and create the RLS roles.

4. With minimal development and maintenance effort, create **five meaningful KPIs** (e.g., Total Revenue, Profit, Margin %, etc.) relevant to this use case. For each KPI, include: **KPI LY**, **KPI LY YTD**, **KPI Target** (assumed if needed), **KPI Actual vs. Target**, and **KPI vs. KPI LY YTD %**. Present these KPIs from a strategic perspective—refer to the image for inspiration but use your own creative approach rather than replicating it exactly.

5. Make a chart showing the top 5 Subcategories **for the category that has the most sales amount**, it should be dynamically changing by the slicers.
6. In a new Page add a Year and Month Slicer, add a chart where you analyze each country's Sales, create drill through in this chart, this should go to the drill through page to view the other country's history **for the previous years** as well, regardless of the selected year in the main page.
7. Make a table visual showing each country's Sales amount % of the total sales amount of the continent, the value shouldn't be changed by the country slicer.
8. Create a single-select **Date slicer** for choosing a specific day, and build a chart that displays the **number of orders scheduled for delivery** within the next **1 week, 15 days, 1 month, and 6 months** from the selected date.
9. The CEO wants to know how many promotions are available at any month starting from 2011 to 2014, note that you might have a promotion without end date, that means they are valid
10. The CEO wants visibility into KPI performance. Use any 10 KPIs you've created, and display two cards: one showing the **number of KPIs achieving the target**, and another showing the **number of KPIs under target** (based on the previously assumed targets). When hovering over each card, display a tooltip listing the exact KPIs in each category in a clear and structured format.

Over Achieving	Under Achieving			
10	4			
KPI	Target	Actual	%	
Sales Volume	100	80	80%	
Profit	50	30	60%	

Kindly note that it should be dynamic, and changing based on the Date and Country

11. For the **Marketing Dataset**, allow the user to choose different dates for a specific visual using **buttons** for date selection:

- YTD Selection** → It should display the **Impressions YTD**, **Impressions YTD LY**, and **Change %** comparison for the selected indicator. Include an **arrow** to visually indicate direction and a **trend chart** to show the trend over time.

- Time Range Selection:** Provide options to select **Last 15 days**, **Last 30 days**, or **Last 45 days** (from today). For example, selecting **Last 15 days** should compare the data with the **same 15 days in the previous year**.

- Manually Selected Periods:** Allow the user to manually select **Period 1** and **Period 2**. Display the **% comparison** between these periods, along with an **arrow** to indicate the direction and a **trend chart** showing the trend over the selected periods.
