

Project Notes

Deadline: 10/2/2026

You will make a folder of your Group Name as shown in the pdf in the folder as example.

Team 1 in Sunday group Mohand will make folder named Team 1 in the folder of Sunday Group Upload the following:

1- Presentation and Documentation (Including Recommendations)

2- .ppix file

3- The link of report public link after uploading in the service

Some Instructions:

1- You must use Figma or Canva in Design

2- Build the modelling in correct way

This is some wrong ideas that other colleges made before on this project to help you not to made it:

Q	Requirement	Comment
Q1	Single Select Year slicer	Multi Select
Q1	Line Chart	Bar Chart is implemented
Q1	1 Line Chart	2 Bar charts on top of each other, now when you hover over Ordered amount nothing will show, it is not practical as well because their Y axis values might be different in other cases
Q1	Previous Years Comparisons	If you select in the year slicer 2012, the tooltip will show only 2012 .. The requirement is to show Last 3 years
Q3	RLS	You created a static RLS only for these 2 conditions, while it was more logical and practical to build a dynamic solution if you have more and more users with different RLS access conditions, imagine you have 100 users, will you create 100 roles?
Q4	Multiple KPIs with minimal efforts	you created the KPIs, but not without minimal efforts, please read about calculation groups and measures selection
Q5	Dynamic Top 5	You made it static only for computers, while I clearly mentioned to make it dynamic, so If for example I excluded Computers from the page .. It should have brought the

		highest categories after Computers
Q6	Drillthrough	If you selected 2012 in the first page and drilled through the second page, it will have only 2012 data, while the requirement was to separate the year filters and to show all historical data
Q8	Next N	You built the measure correctly but a very important point you missed, is that there is a relation between date table and Sales table using [ordered amount] ,, so if you select next 7 days of 1/1/2012 ,, accordin to your measure it will get the deliveries in the next 7 days and ordered on 1/1 .. so the second condition caused the data descripancy in your measure
Q9	Promotions	you added the X axis from End Date, So if there is a current promotion .. It won't be picked in your chart because the End Date will be empty as I mentioned in the requirement
Q11	Time Ranges	The Chart doesn't look like what is required, there should be 2 lines in all the cases, one line to represent the current period and the second line to represent LY period. In addition to that you haven't added any line charts in 2nd and 3rd option
